HCML Monitoring Portal: acknowledging or closing a problem
Operator's browser
Server
Zabbix
POST /api/problems/acknowledge with event ids, a message, close or not, and the X-HCML-CSRF header
1
guard: signed in, role operator or admin, and the write switched on
2
check the body, at most 50 event ids, and add the user's name to the message
3
event.acknowledge with the write token
4
result
5
log the name, the address and the outcome, then drop the cached problem entries
6
200 ok
7
for about 15 seconds the server re-reads the list with a very short cache, because the problem can still re
the live stream pushes the new list when it changes
